

Logo variations

There are three colour variations that will give you plenty of flexibility to work with in just about every application. Each of these variations is available in both PMS and CMYK as AI (Illustrator) and EPS vector files. The RGB version is also available as JPG and PNG files. SVG is the preferred format for digital applications.

Please note that the logo may also be used without the power smart tagline in limited applications, as shown on the bottom right.

Colour

For use against a white background in colour applications (including four-colour process, spot colour and onscreen).

Black

For use against a white background in limited-colour applications.

Reverse

For use against colourful, dark or busy backgrounds in both full- and limited-colour applications.

Without tagline

You may sometimes see the logo without the power smart tagline. This is only for signage and permanent installations—never use it anywhere else.

Symbol variations

There are instances when space is limited or legibility is a concern, but our brand needs to be identified at a glance. In these cases, we can use the symbol alone (for example, the signage on the top of our building in Vancouver).

We have two versions of our symbol—one has a white border and the other does not. Our preferred option is to use the symbol on a white background. But if the symbol will be placed on a coloured or busy background, use the version with the white border so that the symbol is clear and visible.

Using symbol-only variations

The Grass and Sea colours are an integral part of our symbol and should always be presented when symbol-only logo variations are used.

Symbol

Where space is limited or legibility is a concern, and our brand needs to be identified at a glance, we can use the symbol alone. This is for permanent signage, power boxes or uniforms.

Symbol with border

When the logo is placed on a coloured or patterned background, use the symbol with white border so it is clear and visible.
